

Table 1. Adjusted Cox interaction model between *region* and *age at treatment* for conventional serological tests in children/adolescents (1-19 years) vs adults (>19 years).

Serological test	Region according to genotype prevalence	
	HR (95% IC) for DTU TcII	HR (95% IC) for DTU TcV
ELISA*	6.60 (2.03–21.42)	1.71 (0.77–3.81)
IIF**	9.37 (3.44–25.50)	1.54 (0.64–3.71)
IHA***	5.55 (1.46–21.11)	1.09 (0.44–2.70)

* HR with interaction effect (p= 0.062)

** HR with interaction effect (p= 0.007)

*** HR with interaction effect (p= 0.047)

DTU = Discrete Typing Units. HR=Hazard Ratio. IC=interval confidence.
